(* CHECK ON WWW.SIOENAPPAREL.COM IF YOU HAVE THE MOST RECENT VERSION

This garment complies with the European Directive 89/686/EEG regarding Personal Protection (PP's) garments. PPE of simple design – category I.

This cuff provides protection against superficial injury, provides protection against small shocks and vibrations which do not cause irreparable harm. This personal protection equipment does not contain materials that are known to provoke allergic reactions or that are known to be mutagen or carcinogen.

Care (*): washing instructions are mentioned on the label. If the garment is composed of different parts, f.i. detachable lining the best results are obtained by washing the different parts separately. Every part has its own label. If, however, the parts are washed together, the mildest washing instructions have to be used. Brightly colored garments have to be washed separately. Close zipper, press studs, touch closure before washing the garment. In case the garment is made of non waterproof fabric, washing inside out is recommendable.

1. Maximum washing temperature allowed is mentioned in the tub . A line under the tub means that the garment has to be washed with restricted movements . Some garments have to be washed by hand.
2. The use of The use of chlorine bleaching products is not allowed for the care or disinfection of your PPE . Be careful! also the use of chlorine cleaning products as for e.g. floors, materials... can damage your PPE and the protective layer of it.
3. According to the composition of the garment, this can be or cannot be dried in a tunnel dryer. The garment cannot be dried in a tunnel dryer: do not dry in a tunnel dryer, dry in a tunnel dryer at low temperature. You obtain the best results by drip-drying.
4. The garment can or cannot be ironed (see label): do not iron, Ironing permitted at max. 110°C. Ironing at max. 150°C. In some cases the garment has to be ironed, to improve the repulsion of chemicals, after each washing, at the exterior side, at the exception of the reflective stripes, at low temperature (max. 110°C).
5. Depending on the composition of the garment dry cleaning may or may not be allowed, with restricted movements. dry cleaning with restricted movements allowed, except with the product trichlore-ethylene. no dry cleaning.
6. Do not use washing softeners. Make sure that the garment is thoroughly rinsed, so that all remaining detergents are removed.
7. For maximum satisfaction, do not store the garment when wet. Storage of the garment in a dark and dry place will prevent discoloration. Any complaints regarding color changes will not be accepted.
8. NEVER wear a damaged garment. A damaged garment no longer offers optimal protection and therefore should immediately be replaced or repaired. Damaged garments should be destroyed or marked immediately so that they can no longer be worn. The safe destroying, recycling and disposing of the garments can be done through means of mechanical destroying or burning in a specialised institute. (*) Sioen nv has no take back obligation.

Attention

This cuff are unique size and it is possible that they don't suit all users.

For the position of the cuff, it is necessary to put the elastic for tightening up well behind the elbow.
